1. The following is an examiner's statement of reasons for allowance:

The invention is directed to a method and system of driving optical shutter elements corresponding to a predetermined number of bits.

Claim 4 identify the uniquely distinct features of "a comparator for turning ON each optical shutter element, comparing the value latched in the latch register with the count value of the counter, and turning OFF each optical shutter element when both values match."

Claim 11 identify the uniquely distinct features of "a driver for modulating the ON time of the electro-optic elements based on the image data by a predetermined number of bits, and driving each of said electro-optic elements at a gradient exceeding a maximum gradient corresponding to the predetermined number of bits without turning OFF the electro-optic elements when driving one line."

The closest prior art, Fujita et al (US 5,872,587) disclose a conventional method and system of driving optical shutter elements corresponding to a predetermined number of bits, either singularly or in combination with other cited references fail to anticipate or render the above underline limitations obvious (to use with other claimed limitations).

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
